MEMORANDUM

SUBJECT: Analytical Results--- **Stimson Lumber / R8070008**

FROM: Mark Murphy, Organic Chemist
Vicente Marti, Organic and Inorganic Chemist
Linda "Bo" Meyer, Laboratory Quality Assurance Officer

THRU: Tony Medrano, Acting Director
Laboratory Services Program

TO: Francis Tran, 8P-P3T
Toxic Substance Control Act

Attached are the analytical results for Stimson Lumber R8070008. The table below shows the number of containers received , the work order number(s) assigned, and the date received:

	8610005	8610008	8611004	8611005	8611007	8611010	Total
25-Oct-2006	16	0	0	0	0	0	16
27-Oct-2006	0	16	0	0	0	0	16
13-Nov-2006	0	0	46	18	0	0	64
15-Nov-2006	0	0	0	0	30	0	30
22-Nov-2006	0	0	0	0	0	8	8

These samples were prepared, analyzed, and verified by the Technical and Management Services Laboratory according to the requirements of the Laboratory Services Request (LSR) and procedures found in the laboratory Quality Management Plan dated March 31, 2003.

Note: The laboratory herewith transmits this deliverable to the program/project partner for determination of "final data usability" to include data validation and data quality assessment per and in accordance with EPA QA/G-8, *Guidance on Environmental Data Verification and Data Validation*, November 2002, EPA/240/R-02/004.

Case Comments

PCB Analysis

Analyst: Mark A. Murphy

Introduction:

Four water samples were received by the EPA Region 8 laboratory on November 22, 2006, for analysis by EPA method 8082 for PCBs as Aroclors. All extractions were completed within 7 days after sample receipt and all analyses were completed within 40 days after extraction.

Three water samples were received by the EPA Region 8 laboratory on November 15, 2006, for analysis by EPA method 8082 for PCBs as Aroclors. All extractions were completed within 7 days after sample receipt and all analyses were completed within 40 days after extraction.

Nine soil samples were received by the EPA Region 8 laboratory on November 13, 2006, for analysis by EPA method 8082 for PCBs as Aroclors. All extractions were completed within 14 days after sample receipt and all analyses were completed within 40 days after extraction.

Twenty-three soil samples were received by the EPA Region 8 laboratory on November 13, 2006, for analysis by EPA method 8082 for PCBs as Aroclors. All extractions were completed within 14 days after sample receipt and all analyses were completed within 40 days after extraction.

Thirteen soil samples and three water samples were received by the EPA Region 8 laboratory on October 27, 2006, for analysis by EPA method 8082 for PCBs as Aroclors. All soil extractions were completed within 14 days after sample receipt and all analyses were completed within 40 days after extraction. All water extractions were completed within 7 days after sample receipt and all analyses were completed within 40 days after extraction.

Eight soil samples were received by the EPA Region 8 laboratory on October 25, 2006, for analysis by EPA method 8082 for PCBs as Aroclors. All extractions were completed within 14 days after sample receipt and all analyses were completed within 40 days after extraction.

Analytical Method:

Samples were analyzed using SOP 509, "Standard Operating Procedure for the Determination of Polychlorinated Biphenyls in Soil Extract by Accelerated Solvent Extraction (EPA Method 3545) and Dual Capillary Column Gas Chromatography with micro-ECD," consistent with EPA method 8082, "Polychlorinated Biphenyls (PCBs) by Gas Chromatography," revision 1, November 2000.

Quality Control Notes:

Routine sample quality control results such as matrix spikes and laboratory duplicates are reported on the quality control pages of this report. Any results not within QC criteria are discussed in the analyst notes section. Instrument quality control results, such as continuing calibration verification (CCV), continuing calibration blanks (CCB), initial calibration verification (ICV), initial calibration blank (ICB), and instrument blanks (IBL), were within QC criteria unless stated in the analyst notes section.

Analyst Notes:

The result for sample 8611004-04 (B15-S-1) was "J" flagged as an estimated value since the surrogate recovery was less than the 70% acceptance range.

Results for samples 8610008-05, 8610008-06, 8610008-07, 8610008-08, 8610008-09, and 8610008-12 were "J" flagged as estimated values because the surrogate recoveries for those samples were less than 70%. The duplicate RPD was greater than the 20% acceptance range. Sample was not rerun since sample homogeneity was too difficult to achieve based on sample jar size, sample amount and elevated Aroclor 1254 levels in the sample. Also, matrix spike values based on Aroclor 1016 and Aroclor 1260 were greater than the 130% acceptance range because of signal

Case Comments

enhancement due to the elevated Aroclor 1254 levels present in the spiked sample.

The matrix spike recovery for Aroclor 1260 was greater than 30%. Duplicate RPD was greater than 15%. Sample results were not "J" flagged since all other QC was well within acceptance parameters. All QC results showed that sample results prove that method and instrument sensitivity and reproducability are well within quality assurance limits. All results were confirmed by dual column and dual detector confirmation. No other difficulties or unusual circumstances were encountered during these analyses.

Extractable Petroleum Hydrocarbons

Analyst: Vicente C. Marti

Introduction:

A total of six work orders were received:

WO 8610005, received October 25, 2006, with 8 sediment samples

WO 8610008, received October 27, 2006, with three water samples and 13 sediment samples

WO 8611004, received November 13, 2006, with 23 sediment samples

WO 8611005, received November 13, 2006, with 9 sediment samples

WO 8611007, received November 15, 2006, with three water samples and 12 sediment samples

WO 8611010, received November 22, 2006, with four water samples

Extraction and Analysis:

Sediment samples were prepared and extracted according to SW-846 method 3545 "Pressurized Fluid Extraction" for soil samples. Ten grams of sample was extracted with methylene chloride and concentrated to ten milliliters of extract. Samples were analyzed by GC/MS utilizing the Massachusetts total extractable petroleum hydrocarbons (TEPH) method. Samples were not fractionated with silica gel prior to analysis. The method was calibrated from 0.5 μ g/g to 15.0 μ g/g. Samples were extracted and analyzed well within the 14 day holding time.

The water samples were extracted by method 3520, "Continuous Liquid-Liquid Extraction," with methylene chloride. After extraction samples were concentrated to 10 milliliters, and one milliliter was analyzed by the GC/MS TEPH method. No silica gel fractionation was required.

TEPH Sediments:

Only two samples from the 65 sediments received needed further dilution. Samples from stations B21-S-1 and B21-S-2 required a further 10X dilution. The reporting limits for these two samples were changed to reflect the dilution. All sediment samples that were determined on November 17, 2006 (work order 8611007 only), will have the value reported for C19-C36 aliphatic hydrocarbons qualified (J) because of the high value of n-nonadecane found in the preparation blank and other QC samples. It appears that the surrogate spiking solution was contaminated with n-nonadecane. The blank spike plus the two matrix spikes determined during the analysis of sediment samples from work order 8611007 had low values for n-octacosane. Since all the other QC samples had good values for this compound no qualification of the data is required.

The GC/MS system maintained a passing tune during the entire analysis. Continuing calibration standards (CCV) were determined during and at the end of the test, with all compounds within the QC limits. Surrogates recoveries were within limits for all samples.

TEPH Waters:

Case Comments

No unusual circumstances were found during the analysis of the water samples.

Water samples from stations A1524-M3 and A1524-M4 had an unusual amount of sediment, which was very fine and sticky. The extracts produced by these two stations were almost identical in composition. No aliphatic or aromatic hydrocarbons as listed in the TEPH method were found. The initial and final continuous calibration standards had slightly low recoveries for the last PAHs on the list. These two samples had low recoveries for the surrogate ortho-terphenyl. This low recovery is probably due to adsorption from the sediment present in the samples. The following compounds and their minimum concentrations were found in these two samples:

Caprolactam.....10.0 ug/L

Isopropyltoluene....10.2 ug/L

3/4-Methylphenol...13.2 ug/L

No water samples were submitted for duplicates or matrix spike analysis.

Technical and Management Services

Ref: 8TMS-L

MEMORANDUM

SUBJECT: Analytical Results--- **Stimson Lumber / R8070008**

FROM: Vicente Marti, Organic and Inorganic Chemist
Linda "Bo" Meyer, Laboratory Quality Assurance Officer

THRU: Tony Medrano, Acting Director
Laboratory Services Program

TO: Francis Tran, 8P-P3T
Toxic Substance Control Act

Attached are the analytical results for Stimson Lumber R8070008. The table below shows the number of containers received , the work order number(s) assigned, and the date received:

	8610008	Total
27-Oct-2006	16	16

These samples were prepared, analyzed, and verified by the Technical and Management Services Laboratory according to the requirements of the Laboratory Services Request (LSR) and procedures found in the laboratory Quality Management Plan dated March 31, 2003.

Note: The laboratory herewith transmits this deliverable to the program/project partner for determination of "final data usability" to include data validation and data quality assessment per and in accordance with EPA QA/G-8, *Guidance on Environmental Data Verification and Data Validation*, November 2002, EPA/240/R-02/004.

<i>Surrogate: o-Terphenyl</i>		44.8 %	Limit 40-140		1
<i>Surrogate: 1-Chlorooctadecane</i>		56.0 %	Limit 40-140		1

Note: "J" Qualifier indicates an estimated value.

Analyte	Result	Reporting Limit	Units	Spike Level	Source Result	%REC	%REC Limits	RPD	RPD Limit
---------	--------	-----------------	-------	-------------	---------------	------	-------------	-----	-----------

NOTE:

%REC is percent recovery, Result (less sample contribution) divided by the Spike Level

RPD is the Relative Percent Difference (difference between the Result and the Source Result) divided by their average

MEMORANDUM

SUBJECT: Analytical Results--- **Stimson Lumber / R8070036**

FROM: Mark Murphy, Organic Chemist
Steven Callio, Laboratory Quality Assurance Officer

THRU: Tony Medrano, Acting Director
Laboratory Services Program

TO: Francis Tran, 8P-P3T
Toxic Substance Control Act

Attached are the analytical results for Stimson Lumber R8070036. The table below shows the number of containers received , the work order number(s) assigned, and the date received:

	8703009	Total
15-Nov-2006	12	12

These samples were prepared, analyzed, and verified by the Technical and Management Services Laboratory according to the requirements of the Laboratory Services Request (LSR) and procedures found in the laboratory Quality Management Plan dated March 31, 2003.

Note: The laboratory herewith transmits this deliverable to the program/project partner for determination of "final data usability" to include data validation and data quality assessment per and in accordance with EPA QA/G-8, *Guidance on Environmental Data Verification and Data Validation*, November 2002, EPA/240/R-02/004.

Case Comments

PCB Analysis

Analyst: Mark A. Murphy

Introduction:

Twelve soil samples were received by the EPA Region 8 laboratory on November 15, 2006, for analysis by EPA method 8082 for PCBs as Aroclors. Samples were not run for PCBs on original request (LSR R8070008) due to analyst oversight. Although the holding times had expired, the program manager requested that the samples still be run. A new LSR was generated for these samples as R8070036. All the samples were stored in cooler B at 4 °C until analysis. The proper preservation conditions were maintained for the storage of the samples. All samples are reported on a dry weight basis.

Analytical Method:

Samples were analyzed using SOP 509, "Determination of Polychlorinated Biphenyls in Soil Extract by Accelerated Solvent Extraction (EPA Method 3545) and Dual Capillary Column Gas Chromatography with micro-ECD," consistent with EPA method 8082, "Polychlorinated Biphenyls (PCBs) by Gas Chromatography," revision 1, November 2000.

Quality Control Notes:

Routine sample quality control results such as matrix spikes and laboratory duplicates are reported on the quality control pages of this report. Any results not within QC criteria are discussed in the analyst notes section. Instrument quality control results, such as continuing calibration verification (CCV), continuing calibration blanks (CCB), initial calibration verification (ICV), initial calibration blank (ICB), and instrument blanks (IBL), were within QC criteria unless stated in the analyst notes section.

Analyst Notes:

All results were "J" flagged as estimated values since they were analyzed outside of the holding times. The results for samples 8703009 (7-12) were also "J" flagged as estimated values since the surrogate recoveries on both detectors were less than the 70% acceptance limit. All results were confirmed by dual column and dual detector confirmation (mass selective detector and micro-ECD). No other difficulties or unusual circumstances were encountered during these analyses.

Olympus Technical Services, Inc.
Analytical Data Validation Form

Client/Project	Stimson Lumber Company Pond	Reviewer: Stine
Work Order No.	A1534	Laboratory: EPA Region 8 Lab
Sample Date	10/24-11/21/06	
Analyses	EPA Analytical Method 8082 for PCBs & Massachusetts Method for EPH	

Analytical Completeness

75 sample results received of 75 expected = 100% percent
Comments: _____

Defensibility

Chain of Custody present and signed	Yes	Samples shipped cool Yes
Preservative in sample containers	NA	Defensibility parameters acceptable Yes
Comments:	_____	

Holding Time

Samples extracted within proper holding time No
Samples analyzed within proper time No

Comments: Batch 0700035 extracted and analyzed 117 to 118 days after collection.

Results for these samples should be qualified as estimated.

Field Blanks

Appropriate number of equipment blanks submitted	Yes
Appropriate number of trip blanks submitted	NA
Analytical results above laboratory detection limits	Yes
If analytes detected, list concentrations	Three field blanks submitted for soil samples. One (B23-W-1/W-2) contained a detectable concentration of C19-C36 Aliphatics (10.2 µg/l) and another (B21-W-1/W-2) contained a detectable concentration of Aroclor 1254 (0.29). These results are approximately two orders of magnitude less than the solid reporting limits and the data do not need to be qualified based on these detects.

Method Blanks

Analytical results above laboratory detection limits	Yes
If analytes detected, list concentrations	EPH constituents n-Hexacosane (0.523 mg/kg), n-Octacosane (0.652 mg/kg), and n-Triacontane (0.932 mg/kg) detected in method blank for batch 0600314. EPH constituent n-Triacontane (0.594 mg/kg) detected in method blank for batch 0600329. EPH constituent n-Triacontane (0.729 mg/kg) detected in method blank for batch 0600336. EPH constituent n-Nonadecane (0.904 mg/kg) detected in method blank for batch 0600339.

Surrogate Recoveries

Recoveries within laboratory control limits	No
List samples and results outside of laboratory control limits	Surrogate recoveries low for PCB analyses for samples B8-S-1, B8-S-2, B10-S-1, B9-S-1, B9-S-2, B9-S-5, and B15-S-1.

Laboratory Duplicates

Duplicate RPDs within laboratory control limits _____ No _____
Samples and RPDs outside of laboratory control limits _____ Batch 0600347, aroclor 1254 RPD at 29.1,
limit is 20. Batch 0600349 aroclor 1254 RPD at 36.4, limit is 20.
Batch 070035 aroclor 1254 RPD at 69.3, limit is 20.

Matrix Spike and Spike Duplicate Recoveries

Analyte recoveries within laboratory control limits _____ No _____
Samples and results outside of laboratory control limits _____ Matrix spike (MS) and matrix spike
duplicate (MSD) for batch 0600336 n-Octacosane recovery at 26.3 and 23.9, acceptable range is 40-140.
MS and MSD for batch 0600339 n-Octacosane recovery at 20.8 and 17.9, acceptable range is 40-140.
MS for batch 0600347 aroclor-1260 recovery at 300, acceptable range is 70-130, laboratory attributed
problem to signal enhancements from aroclor 1254 in sample.
MS for batch 0600349 aroclor-1016 recovery at 328, acceptable range is 70-130, laboratory attributed
problem to signal enhancements from aroclor 1254 in sample.

Duplicate RPDs within laboratory control limits _____ Yes _____
Samples and RPDs outside of laboratory control limits _____

Other Laboratory QA/QC Samples

List other laboratory QA/QC samples _____ Method blank spikes _____
Analyte recoveries within laboratory control limits _____ No _____
List samples and results outside of laboratory control limits _____ Batch 0600336, n-Octacosane
recovery at 20.7, acceptable range is 40-140. Results should be qualified as estimated.
Batch 0600337, method blank spike and method blank spike2 n-Nonadecane reocovery at 193 and 185,
acceptable range is 40-140. Results should be qualified as estimated.
Batch 0600339 n-octacosane recovery 20.5, acceptable range is 40-140. Results should be qualified
as estimated.

Field Duplicates

Field duplicate submitted _____ Yes _____
Duplicate RPD calculations _____

RPD Formula $RPD = (SR - DSR) / ((SR + DSR) / 2) * 100$ _____

RPD = relative percent difference _____

SR = sample recovery _____

DSR = duplicate sample recovery _____

Aroclor 1254	0.155	0.197	24%

No other target analytes detected in either sample

Duplicate RPDs within acceptable limits

No

List results outside of acceptable limits
PCB results in samples B7-S-2 and LS outside of control limits of 35 percent RPD when concentrations are greater than five times the DL.

PCB results in samples B23-S-2 and B23-S-3 outside of 2 times the DL if the original or duplicate concentration is less than five times the DL.

All other results within those control limits or the limit of 2 times the DL if the original or duplicate concentration is less than five times the DL. Due to matrix heterogeneity no action taken.

QA/QC Discussion

Batch 0700035 samples B21-S-1, B21-S-2, B22-S-1, B22-S-2, B22-S-3, B22-S-4, B23-S-1, B23-S-2, B23-S-3, B23-S-4, B23-S-5, B23-S-6. PCB detects qualified as estimated since extracted and analyzed outside of holding times. Surrogate recoveries also below acceptable limits for samples B23-S-1, B23-S-2, B23-S-3, B23-S-4, B23-S-5, and B23-S-6.

Surrogate recoveries for PCB analysis outside of acceptable limits for samples B8-S-1, B8-S-2, B10-S-1, B9-S-1, B9-S-2, B9-S-5, B15-S-1. Results are qualified as estimated.

Batch 0600314 samples B5-S-1, B5-S-2, B5-S-3, B5-S-4, B6-S-1, B6-S-2, B6-S-3, and B6-S-4. Detections of several analytes in the method blanks raises the reporting limits for those compounds in by five times the detected limit. The qualified limits are 2.615 mg/kg for n-Hexacosane, 3.26 mg/kg for n-Octacosane, and 4.66 mg/kg for n-Triacontane.

Batch 0600329 samples B7-S-1, LD, B-7-S-2, LS, B8-S-1, B8-S-2, B10-S-1, B9-S-1, B9-S-3, B9-S-4 B9-S-5, B8-S-3, and B9-S-2. n-Triacontane detected in method blank at 0.594 mg/kg and reporting limit raised by five times to 2.97 mg/kg for these samples.

Batch 0600336 samples B17-S-1, B17-S-2, B-18-S-1, B18-S-2, B19-S-1, B19-S-2, B19-S-3, B-20-S-1, and B-20-S-2. n-Triacontane detected in method blank at 0.729 mg/kg and reporting limit raised to 3.645 mg/kg for these samples. n-Octacosane recovery at 20.7, acceptable range is 40-140. n-Octacosane detects for these samples should be qualified as estimated.

Olympus Technical Services, Inc.
Analytical Data Validation Form

Batch 0600339 samples B21-S-1, B21-S-2, B22-S-1, B22-S-2, B22-S-3, B22-S-4, B23-S-1, B23-S-2, B23-S-3, B23-S-4, B23-S-5, and B23-S-6. n-Nonadecane detected in method blank at 0.904 mg/kg and reporting limit raised to 4.52 mg/kg for these samples. n-octacosane recovery at 20.5, acceptable range is 40-140. Detects for these samples should be qualified as estimated.

Batch 0600337 samples B21-W-1/W-2, B22-W-2, and B23-W-2. Method blank spike and method blank spike2 n-Nonadecane reocovery at 193 and 185, acceptable range is 40-140. Detects for these samples should be qualified as estimated.
